## **DETAILED ACTION**

## Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 12-19, drawn to nucleic acid probes and primers, classified in class 536, subclass 24.3 and 24.33, for example.
  - II. Claims 20-24, drawn to methods of preparing a DNA chip, classified in class 435, subclass 4, for example.
  - III. Claims 25-27, drawn to methods of diagnosing an HPV infection, classified in class 435, subclass 6, for example.
- 2. It is noted that Claims 22 and 24 refer to Claim 9, and Claim 25 refers to Claim 2; Claims 2 and 9 have been previously canceled. Despite the obvious typographical error, Claims 22 and 24 and Claims 25 have been included in the restriction.

## Further Restriction

The claims of Group I-III are drawn to a multitude of nucleic acids. Each of the different nucleic acids methods of making and use are independent and distinct because no common structural or functional properties are shared. Accordingly, these claims are subject to restriction under 35 U.S.C. § 121.

Upon election of one of Groups I-III, Applicant is additionally required to elect a single nucleic acid probe and a pair of nucleic acid primers that correspond to said probe. Each probe and primer pair have different structures and function to bind to different segments of an HPV sample. This requirement is not to be construed as a requirement for an election of species, since each of the compounds is not a member of a single genus of invention,

Application/Control Number: 09/807,234 Page 3

Art Unit: 1637

but constitutes an independent and patentably distinct invention.

2. The inventions are distinct, each from the other because of the following reasons:

A) Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the DNA chip can be made by a materially different process, such as by the indirect binding of a nucleic acid probe to said chip via another probe, such as biotin or in a sandwich assay comprising label extender probes and label probes.

B) Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the nucleic acids of Group I could be used in an entirely different manner, such as in a nested PCR reaction or in a method of treatment.

C) Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the inventions are directed to methods having different method steps, starting materials, and goals.

Application/Control Number: 09/807,234 Page 4

Art Unit: 1637

3. Because these inventions are distinct for the reasons given above and have acquired a different status in the art as demonstrated by their different classification and recognized divergent subject matter and because inventions I-III require different searches that are not co-

extensive, examination of these distinct inventions would pose a serious burden on the examiner

and therefore restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an

election of the invention to be examined even though the requirement be traversed (37 CFR)

1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the

inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the

currently named inventors is no longer an inventor of at least one claim remaining in the

application. Any amendment of inventorship must be accompanied by a diligently-filed petition

under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).

Correspondence

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alexander H. Spiegler whose telephone number is (703) 305-0806. The examiner can normally be reached on Monday through Friday, 7:00 AM to 3:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Benzion can be reached on (703) 308-1119. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306. Applicant is also invited to contact the TC 1600 Customer Service Hotline at (703) 308-0198.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0196.
